On top of that, it can provide you with in-depth analysis of the internet bandwidth usage by each employee. The software is easy to install and install and you can start gathering data in just a few minutes. Our software is simple to use, no coding experience required. After the installation, there is nothing more to do. The Internet Access Monitor is a great tool for anyone who wants to keep an eye on their company's internet bandwidth usage. Whether you work for a small business or a large enterprise, you should know how your employees are using the internet so you can control the size of your internet usage. This is why you need a software that can monitor the internet bandwidth usage in real time, at any time and at any location. The Internet Access Monitor does this in a simple and straightforward way. You will need to install it on all the devices connected to your company's internet. You will then be able to monitor the Internet usage of each employee on a daily basis and you can also find out if any of your employees are using internet for leisure purposes. Once the data is collected, you will receive regular updates on the internet bandwidth usage and you will be able to see who is using the internet for what purpose. This way, you can keep an eye on your employees and you will be able to stop any further internet usage by the employees at a very early stage. Our Internet Access Monitor will give you real-time data of internet usage by your employees so you can monitor your company's Internet usage at all times. This way, you can decide on the best time to cut down the internet usage for each of your employees. After you have downloaded and installed the software, you will see a list of all the devices connected to your company's internet. The software will then present you with a list of all the users connected to your company's internet and it will also display the websites visited by each of the users. The software then allows you to create different profiles for each of your employees. You can create the profile for a user by specifying the following parameters: Device Name Device IP Type of User Type of Time One of the interesting things about the software is that you can also monitor the internet bandwidth usage of your users over the period of a week. The results of this will be very useful for you as you will be able to compare the internet usage of your employees on weekdays with the internet usage on weekends. This way, 82157476af
